

## End-to-End Process Redesign

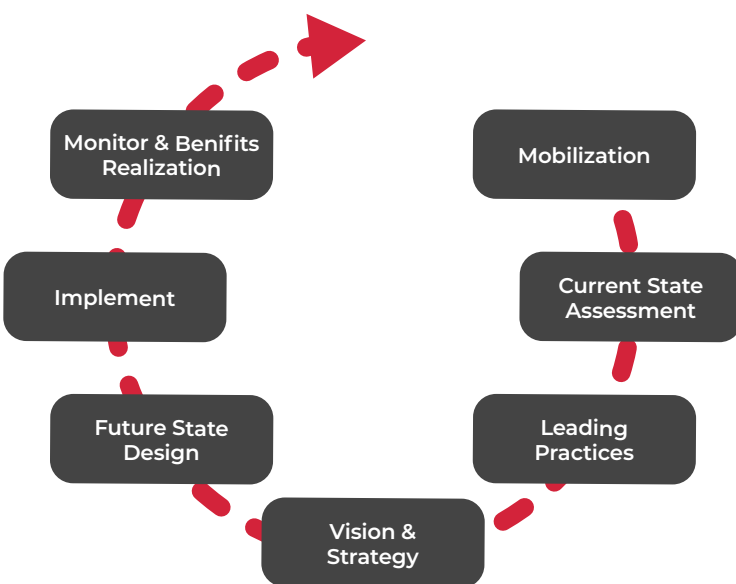

Rapid Growth - Changing Requirements

High Turnover - Technology Changes - Acquisitions

These are just a few of the reasons an organization's processes can become outdated, undocumented, inefficient and downright painful. Elire's End-to-End Process Redesign methodology will engage your team, develop industry leading solutions, and ensure that your team, technology, and processes are in alignment.

Elire's 7-phase End-to-End Process Redesign Framework will engage your organizations' subject-matter-experts along with Elire's process, functional, and technical experts. These 7 phases can also be broken into two smaller initiatives, depending upon your business needs.

In **Mobilization**, the teams will come together to ensure a strong start, defining goals and scope. Together, we will conduct a detailed **Current State Assessment** identifying opportunities for improvement. We will combine Elire's expertise with **Leading Practice** research to develop options and alternatives that your leadership will review as the **Vision & Strategy** is formulated.

In **Future State Design**, technology, your business, and Elire's expertise will come together to develop a metric driven and thoughtful, detailed view of the future. During **Implement**, the technology and process changes will be brought to life. A plan to measure and ensure we've accomplished the goals defined during earlier phases will be put into place as we execute the **Monitor & Benefits Realization** phase.
